RIG WHEEL
MADE BY PRIMEDEL INC

FOR BROKERS & LOAD BOARDS

Carrier paperwork. Partner visibility.

Rig Wheel brings load documents and selected job updates into one carrier workspace.

Built for owner-operators. Built by one.

A partnership proposal from PRIMEDEL INC

rigwheel.us

NOVEMBER 2026

From rate confirmation to a complete invoice package.

1 **Review the load details**

Import a rate confirmation and review extracted fields before saving.

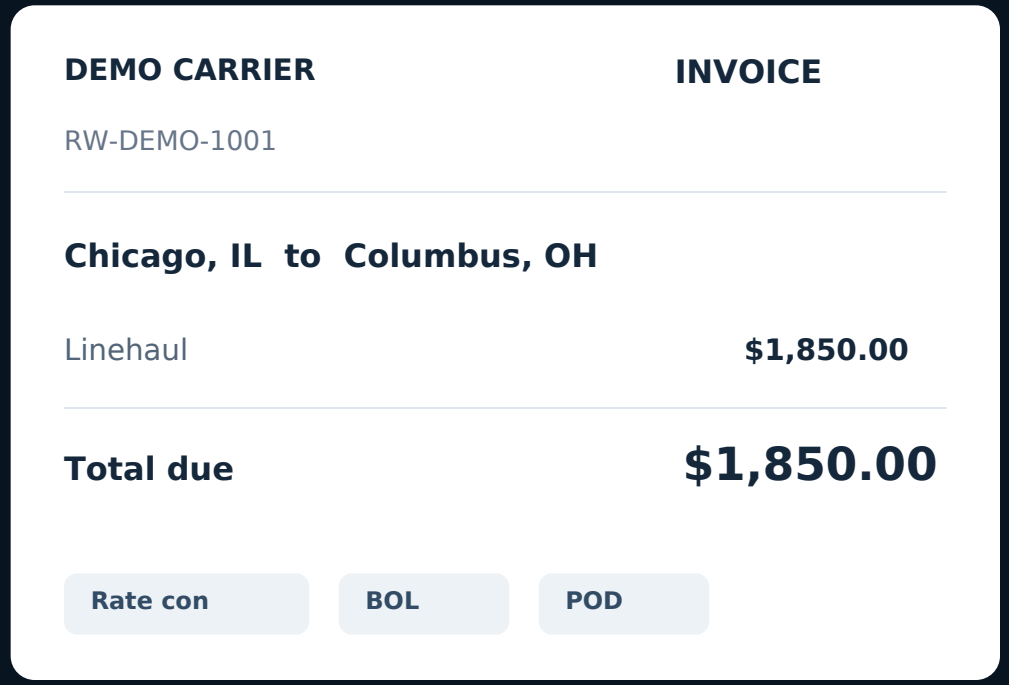

2 **Keep delivery documents together**

Attach the bill of lading and proof of delivery to the invoice workflow.

3 **Prepare the billing package**

Export or send the invoice with its supporting documents.

ILLUSTRATIVE DOCUMENT / FICTIONAL DATA

A clearer view of the load.

Share the job information a broker needs, with carrier-controlled access.

BROKER JOB VIEW

Load RW-DEMO-1042

IN TRANSIT

Chicago, IL to Columbus, OH

Shared files

BOL.pdf **POD.pdf**

ILLUSTRATIVE VIEW / FICTIONAL DATA

- **Selected status and documents**

  Administrators choose job status and specific BOL/POD files to share.

- **Time-limited, revocable access**

  A private job link expires and can be revoked by the carrier.

- **Location only with driver consent**

  Device and connection limits apply. Continuous live coverage is not guaranteed.

Your platform. The carrier workflow.

Rig Wheel connects documents, job records and team communication after a load is selected.

WHAT DIFFERENTIATES RIG WHEEL

- **Document preparation tied to the job**

  Rate confirmations, delivery paperwork and invoice packages stay in one workflow.

- **Access designed around the carrier**

  Company permissions and selected broker sharing limit which records leave the workspace.

PROPOSED API COLLABORATION

Rate confirmation handoff

Import approved load details for carrier review.

Milestone updates

Exchange agreed status events through an approved API.

BOL and POD return

Send selected delivery documents to the partner workflow.

Booking stays with the user on the partner platform.

API connections are proposed and require partner approval; no live load-board integration is claimed.

A focused integration pilot.

Start with a small, agreed workflow and measure what improves.

01

Align on scope

Agree on APIs, permissions, data handling and commercial terms.

02

Test in a sandbox

Validate load IDs, document exchange and status updates with test data.

03

Review a limited pilot

Measure document completeness, POD availability time and update delivery.
